ITS 5.0 Windows Start Menu Program Group

Where can I find the necessary passwords?

You will find the Intelligence Tracking System application icon as well as all documentation files under your windows Start Menu. All documentation has been created using Adobe's Acrobat reader. This application is automatically installed on your computer when the ITS software is installed. The initial passwords that are needed to start the ITS application may be found in the ITS Quick Start Guide – refer to “starting the Intelligence Tracking System software for the first time”. You will also find the ITS sample reports selection within this program group. This will demonstrate the available reports within the ITS software as well as their proper formatting. If your printed reports differ from these samples please notify the ITS support team, this normally is caused by a needed font missing from your system.
